Gestiunea hotelurilor

Chiricuță Marina Anca Grupa 243 In scopul rezolvarii temei la SGBD, am proiectat, in mod cat mai veridic, o baza de date ce tine evidenta unor hoteluri, amplasate in locatii superbe precum hotelurile "Orient" si "Vigo" din Bucuresti, "Orient" si "Ibis" din Brasov si "Luxury" din Sinaia.

Baza de date contine informatii cu privire la fiecare hotel in parte, departamente, angajatii departamentului, camerele si serviciile acesteia, clientii acestuia, produsele disponibile si necesare in hotel dar si furnizorii acestora.

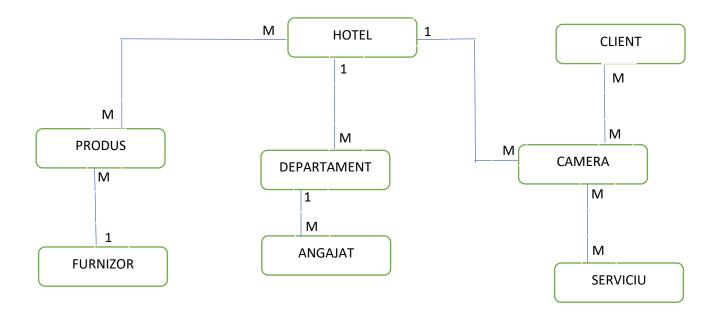

Scopul acestei baze de date este a putea tine evidenta hotelurilor, angajatiilor, clientilor, rezervarilor, pachetelor de servicii, facturilor produselor, intr-un mod eficient si usor de accesat.

Fiecare hotel, avand ca atribute un ID, fiind cheie primara, numele, locatia si numarul de stele, are mai multe departamente(paza, bucatarie, curatenie, receptive), acestea fiind sustinute de angajatii hotelului. Un angajat lucreaza intrun singur department.

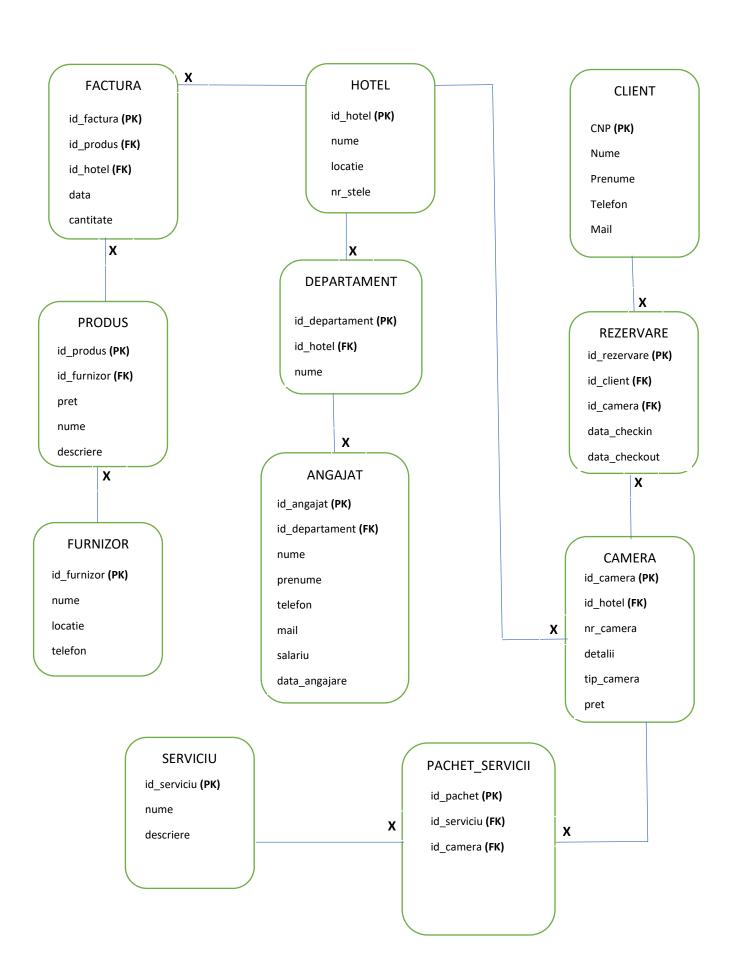

De asemenea, hotelul este aprovizionat cu produse, un hotel putand sa cumpere mai multe produse iar un produs poate sa fie cumparat de mai multe hoteluri. Aceste aprovizionari se fac cu ajutorul furnizorilor, acestia pot livra mai multe produse dar un produs poate fi livrat de catre un furnizor.

Camerele din hotel, sunt de mai multe tipuri, duble, triple, de o singura persoana, cu balcon, fara, de fumatori sau nu. Pretul acestora variaza intre 149 lei si 500. Camera unui hotel poate dispue de mai multe servicii(room service, mic dejun, masaj etc), iar un serviciu poate fi disponibil pentru mai multe camera.

2. Realizați diagrama entitate-relație (ERD)

3. Pornind de la diagrama ERD realizați diagrama conceptuală a modelului propus, integrând toate atributele necesare.

- 4. Implementați în Oracle diagrama conceptuală realizată.
 - 5. Adăugați informații coerente în tabelele create.

----TABEL HOTEL-----

```
create table h_hotel(
  id hotel number(10), PRIMARY KEY(id hotel),
  nume varchar(150) NOT NULL,
  locatie varchar(150) NOT NULL,
  nr_stele number(1) NOT NULL
);
insert into h_hotel
values (1,'Orient','Bucuresti',3);
insert into h_hotel
values (2,'Vigo','Bucuresti',2);
insert into h_hotel
values (3,'Luxury','Sinaia',5);
insert into h_hotel
values (4,'Orient','Brasov',3);
insert into h_hotel
values (5,'lbis','Brasov',4);
```

		♦ NUME		♦ NR_STELE
